

BUG REPORT

Checkout Button Non-Responsive After "Pay Now" Click

Bug ID	BUG-2026-0525
Date Reported	May 25, 2026
Reported By	QA Team
Assigned To	Frontend Engineering
Priority	HIGH
Severity	Critical — Blocks User Payment Flow
Status	Open
Product / Module	E-Commerce Platform — Checkout Module
Affected Version	v3.4.2 (Production)
Target Fix Version	v3.4.3

1. Summary

The "Pay Now" checkout button becomes completely unresponsive after it is clicked. No payment is processed, no error message is displayed to the user, and no visual feedback is provided. This blocks users from completing any purchase, resulting in direct revenue loss and degraded user experience.

2. Environment

Operating System	Windows 11 (22H2), macOS Ventura 13.4, Ubuntu 22.04
Browsers Affected	Chrome 124, Firefox 125, Safari 17, Edge 124
Device Type	Desktop & Laptop (mobile unconfirmed)
Network	Wi-Fi and Ethernet (both affected)
User Account Type	Registered users and guest checkout
Payment Methods Tested	Credit card, Debit card, PayPal

3. Steps to Reproduce

- Navigate to the application at <https://example.com/shop>.
- Add one or more items to the shopping cart.
- Click the cart icon and proceed to the Checkout page.

4. Fill in all required fields: shipping address, contact details, and payment information.
5. Click the "Pay Now" button.
6. Observe the button and page behaviour.

4. Expected vs. Actual Behaviour

Expected Behaviour	Actual Behaviour
Payment is processed and user is redirected to an order confirmation page. A loading indicator appears during processing. Appropriate success or error messages are shown.	The button appears to register the click but nothing happens. No loading indicator, no redirect, and no error message is displayed. Page remains on checkout; button becomes unclickable on subsequent attempts.

5. Console Errors / Logs

The following errors were observed in the browser developer console at the time of the issue:

```
TypeError: Cannot read properties of undefined (reading 'submit') at  
checkout.js:142 Failed to load resource: net::ERR_BLOCKED_BY_CLIENT  
(payment-gateway-api) Unhandled Promise Rejection: PaymentError - Token  
expired or invalid
```

6. Possible Root Cause

- A JavaScript runtime error in checkout.js (line 142) prevents the submit handler from executing.
- The payment gateway API request may be blocked by an ad blocker or browser extension.
- An expired or invalid payment token could be causing a silent failure in the async payment flow.
- A race condition in the button's event listener may disable it prematurely after the first click.

7. Attachments

- Screen recording: checkout_bug_recording_2026-05-25.mp4
- Browser console log export: console_log_chrome_124.txt
- Network request HAR file: network_trace_2026-05-25.har
- Screenshot of frozen checkout page: screenshot_checkout_frozen.png

8. Temporary Workaround

No reliable workaround has been identified. Refreshing the page and reattempting checkout occasionally succeeds but is inconsistent. Users should be advised to contact support if the issue persists.

9. Additional Notes

- Issue was first reported by 3 separate users on May 24, 2026, and reproduced consistently in-house.
- The bug does NOT occur in the staging environment on v3.4.1 — introduced in the v3.4.2 release.
- Disabling browser extensions does not resolve the issue in all cases.
